

# Floaty▲ Arrows

## About

### OVERVIEW

Floaty Arrows is a casual complete project ready to deploy for mobile, it features both endless and levels-based modes that will entertain you for hours with thousands of levels! tap your screen to throw a pin, try not to hit any placed pin or else you lose, throw all the pins to finish the level.

### 2 MODES INCLUDED

Change modes easily from the mainmenu, play the levels mode or challenge yourself in the endless mode

### LEVELS GENERATOR

Generate hundreds or even thousands of levels easily using the built-in levels generator. Type how many levels you need, control the difficulty factor, and then click Generate, the generator takes care of the rest.

### PERFORMANT ANIMATION

Every animation is controlled using tweening, making the asset much smoother

### OBJECT POOLING

Instead of instantiating and destroying gameobjects in runtime, the asset uses object pooling which improves performance drastically

### READY TO DEPLOY

This is a complete project which is game-ready, all you have to do is to change the package name, and you are ready!

# Setup Guide:

## Installing Dependencies

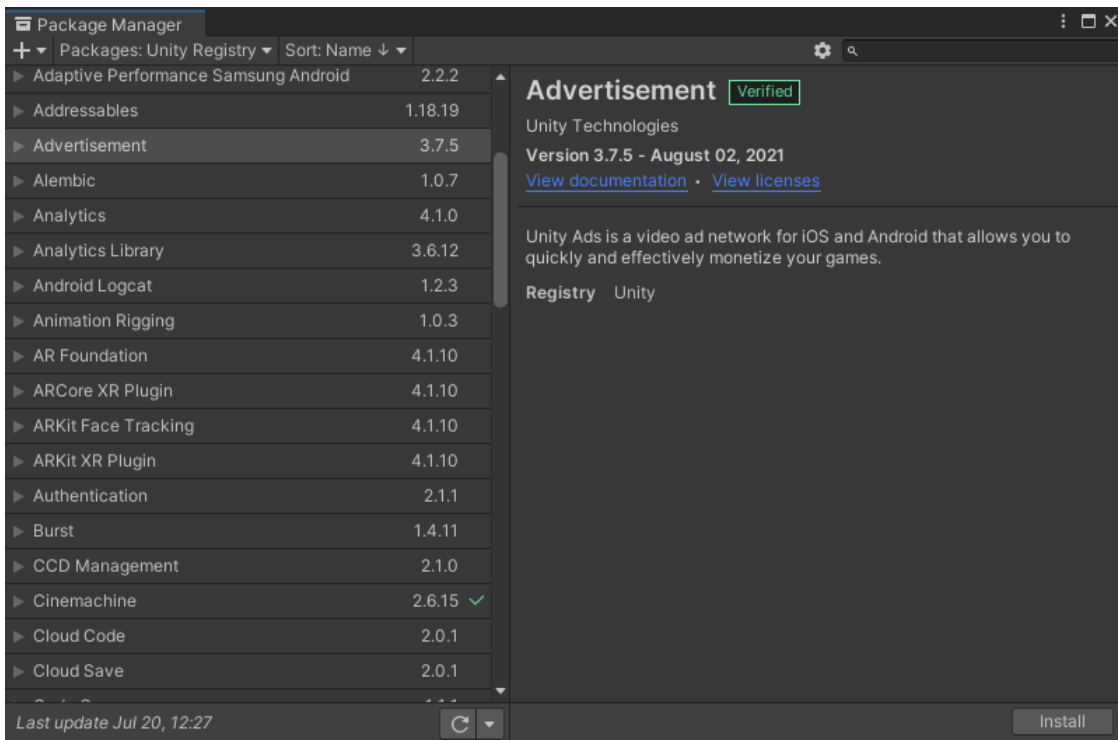

- Import the aa: Complete Project package
- Install TextMeshPro (if not installed)

- Import TMP Essentials

- **Install Unity Ads (if not installed AND if you will use it)**

- **Install LeanTween**

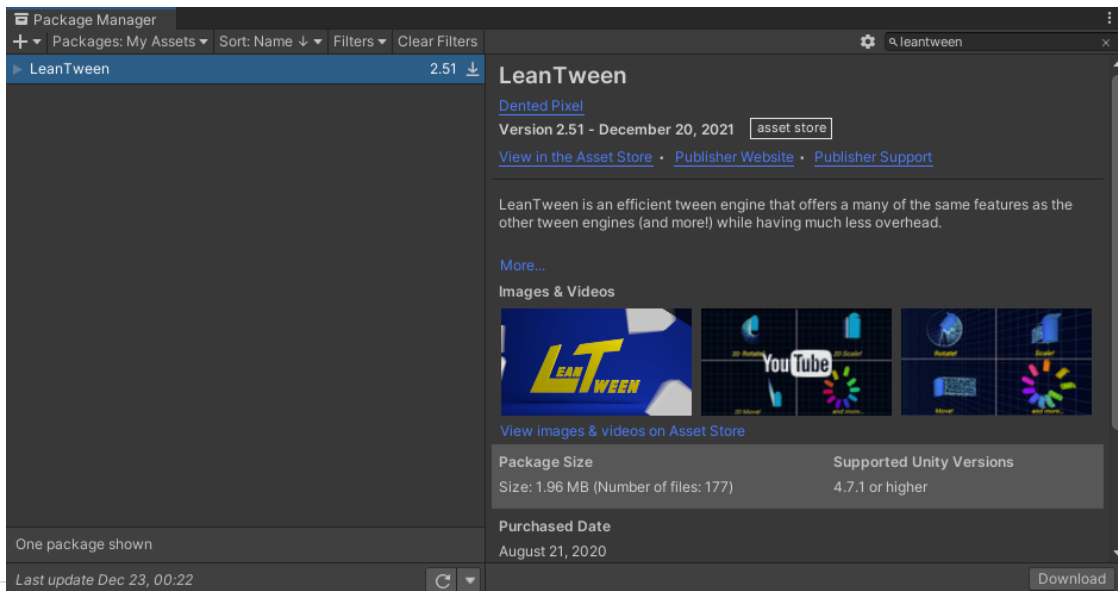

Link: <https://assetstore.unity.com/packages/tools/animation/leantween-3595>

Step 1: Head to the Unity Asset Store and click Add To My Assets

Step 2: Click on Open in Unity

**OR**

Open the Package Manager and choose My Assets then select Lean Tween and install it

# Customizing the Game Manager

## Changing Default Speed (Endless Mode)

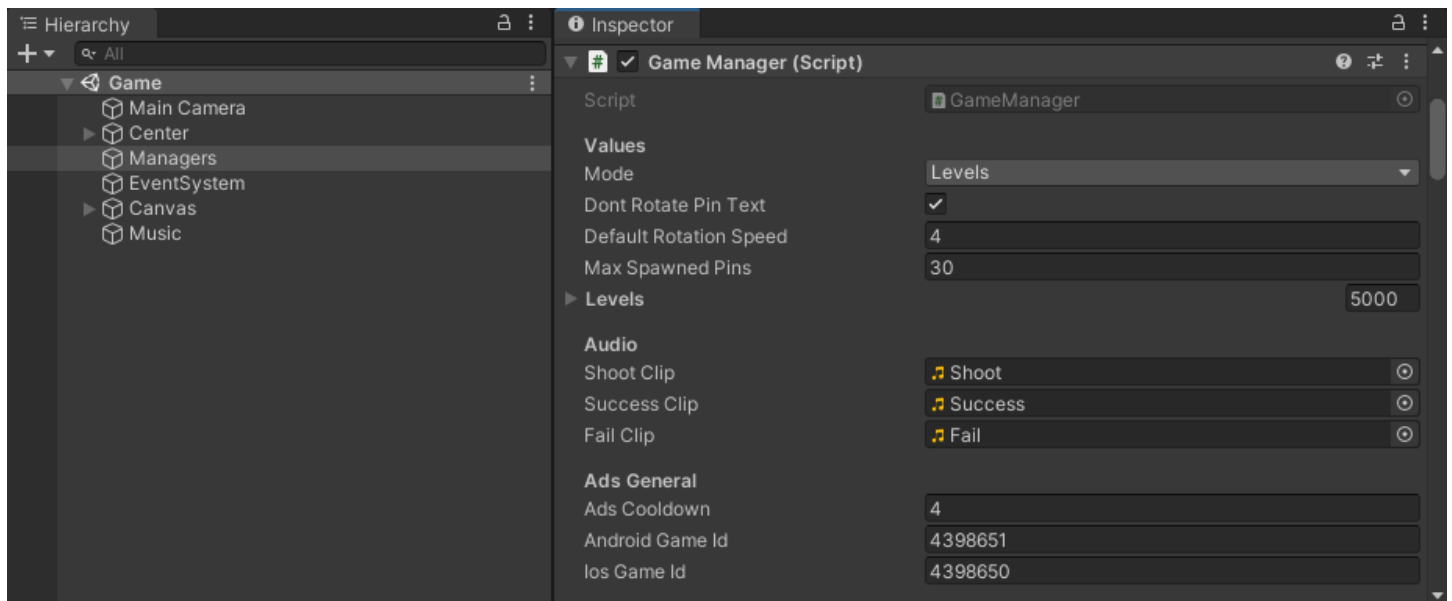

Default Rotation Speed: the lower the faster the start speed is

## Changing Audio Clips

Assign the audio clips to the Shoot, Success, or Fail clips and they will be automatically played by code

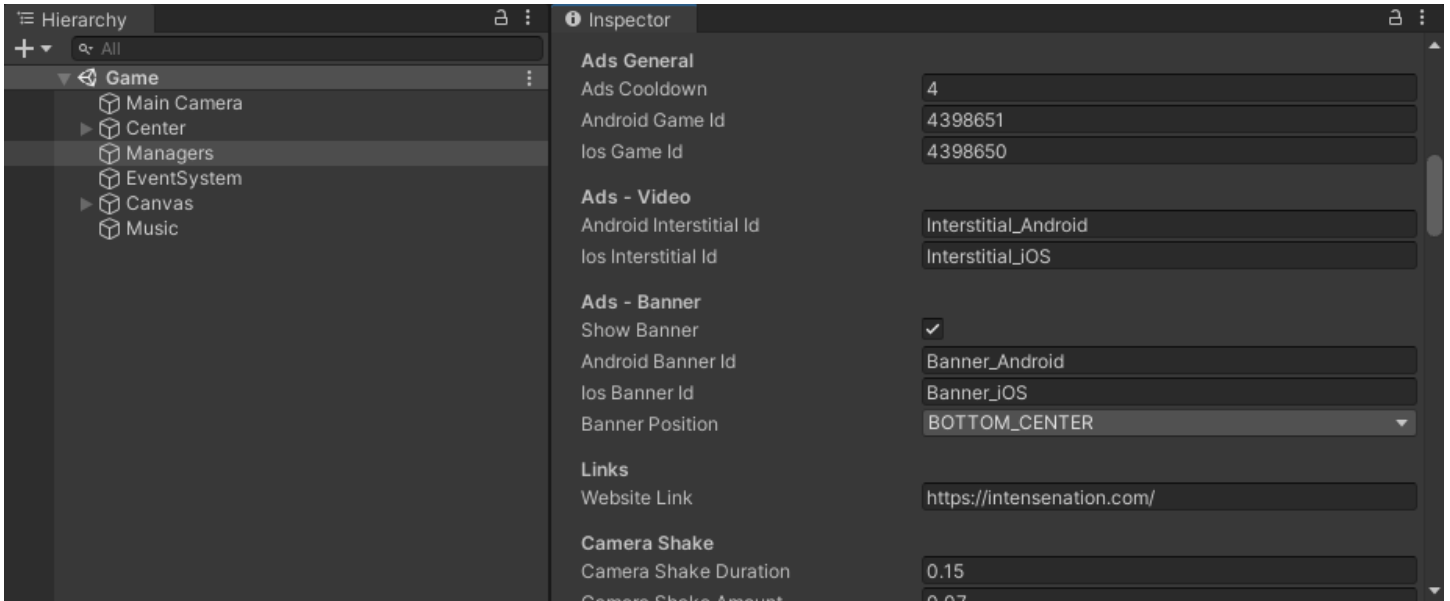

## Don't Rotate Pin Text

When enabled, the number text of the pin is forced to stay upright

## Setting up Unity Ads:

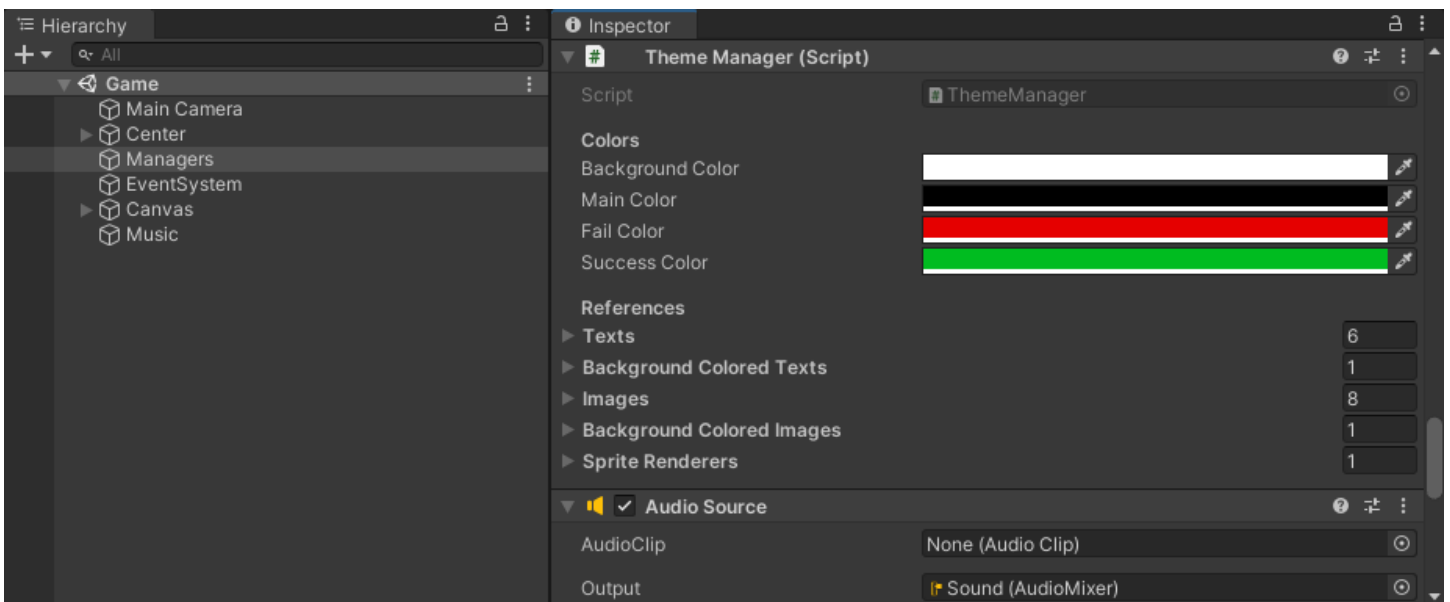

- Change the Placement Id, and Game Id for both Android and IOS from the Unity Dashboard  
Managers → Game Manager → Ads Section
- Ads Cooldown: How many times should the player fail until an ad plays

## Changing Theme Colors

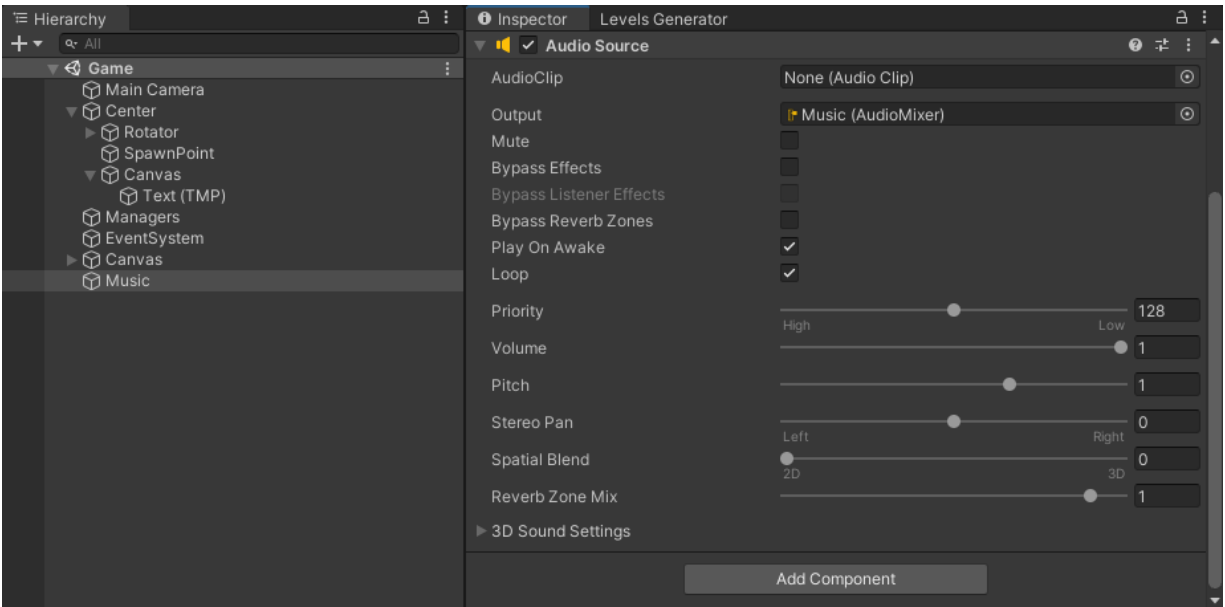

- Change the colors to suit your taste, the colors will be applied on game start for all the target texts and sprite renderers

Managers → Theme Manager → Colors

# Adding Music

- Add a clip to the AudioClip in Music gameobject, if you don't then nothing will happen

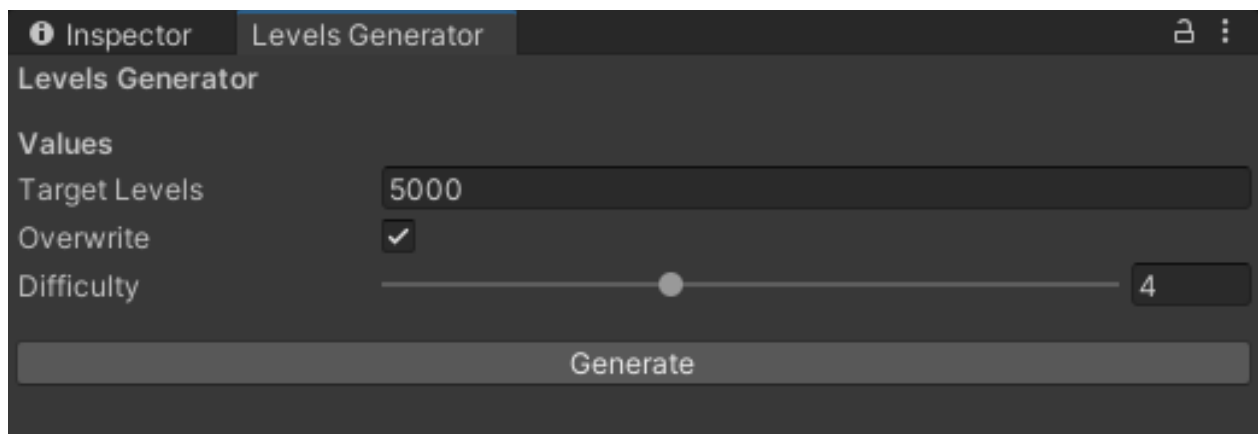

# Generating Levels

## Overview

Generate hundreds or even thousands of levels easily using the built-in levels generator

## How To Use

- Open the Levels Generator window from  
Tools → Floaty Arrows → Levels Generator
- Type how many levels you need, control the difficulty factor
- click Generate

# Included Scene

## The Main Scene

- The “Game” scene includes a game-ready level which is properly set up for you, just open this scene and then customize at as you would like
  - IntenseNation → Floaty Arrows → Scene → Game
- Select and open the Game scene
- Press play to showcase the game in action

## Notes

- For more detailed documentation of how the code works you can check out each script included in the asset
- To open the main scene. Go to IntenseNation → Floaty Arrows → Scene → Game
